# Precision Corn Disease Detection for Healthier Harvests.

AgriScanAI uses world-class artificial intelligence to monitor corn leaf health and identify diseases in seconds. Protect your yield with instant, field-ready diagnostics designed specifically for corn farmers.

# Corn leaf Disease Analysis

Upload a clear photo of a corn leaf to detect disease instantly.

## For Best Results

Please upload a clear well lit photo of single corn leaf. This help our AI achieve the highest detection accuracy for like common Rust or Gray leaf spot.

### Bright lighting

Natural daylight works best for accuracy.

### Clear Focus

Ensure the lesions are clearly Visible

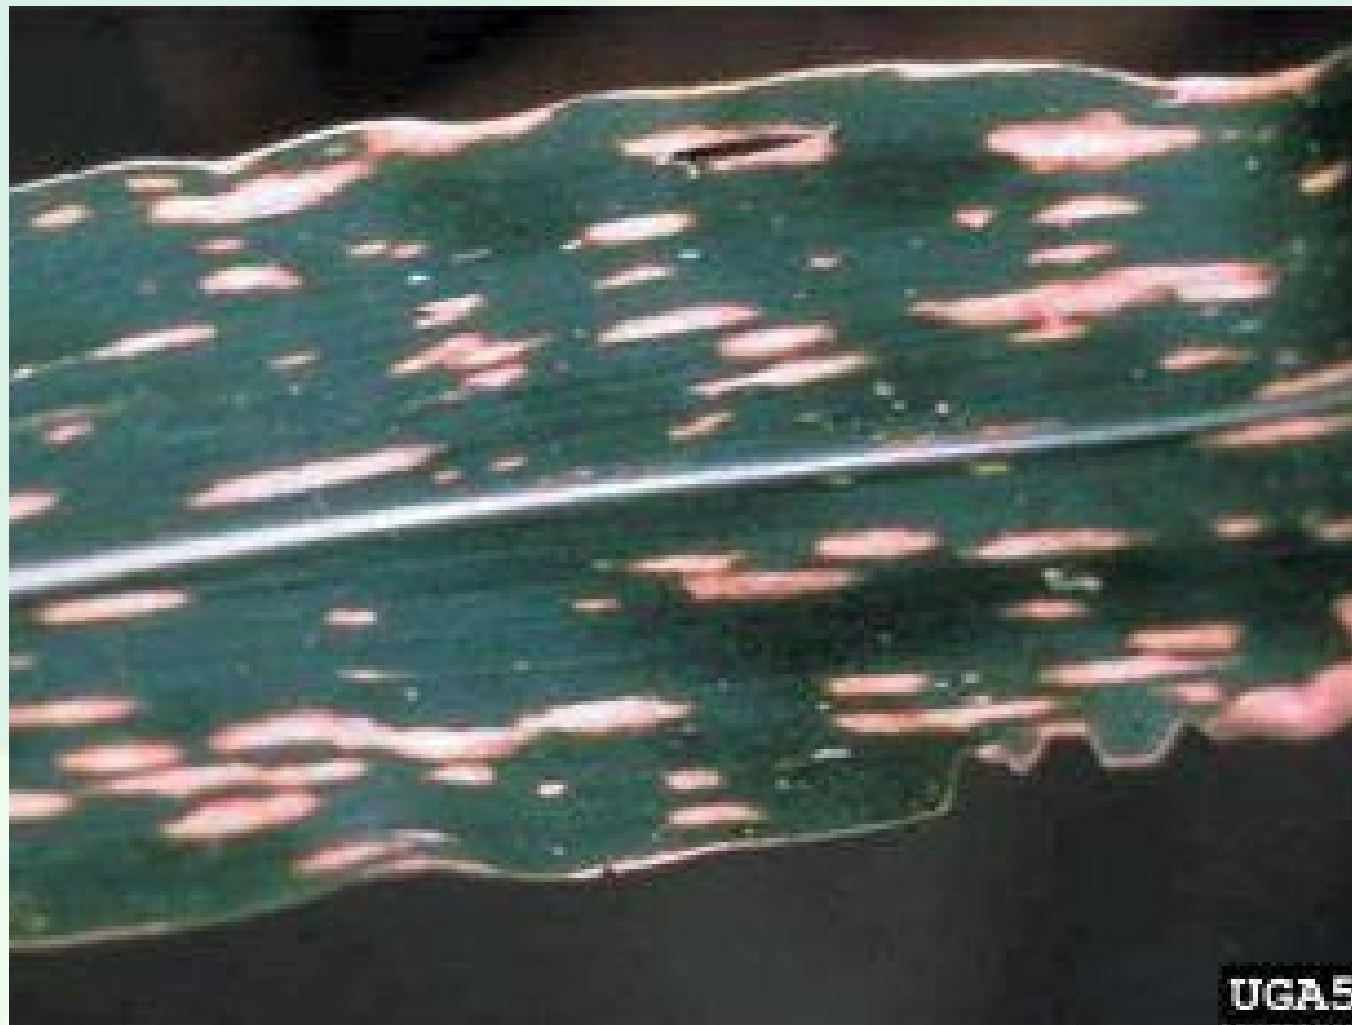

### Single leaf

Avoid multiple leaves in one shot.

## About the project

This project is a web application developed to provide information about corn cultivation in Sri Lanka. The website highlights the main corn-growing districts, cultivation methods, and the importance of maize in agriculture. It helps users learn about corn production, its uses, and the role it plays in supporting farmers and the agricultural economy. The aim of this project is to create an easy and informative platform for anyone interested in maize farming in Sri Lanka. 🌽

### The Technology Behind CornAI

#### Image Recognition

We utilize advanced Convolutional Neural Networks (CNN) to process high-resolution images of corn foliage, identifying microscopic symptoms invisible to the naked eye.

#### Massive Dataset

Our model is trained on over 50,000 expert-labeled images from diverse geographical locations, ensuring reliability across various corn varieties and climates.

#### Edge Computing

By optimizing our model for mobile devices, we provide real-time diagnostics even in remote areas with limited internet connectivity using quantized neural weights.

### Corn Leaf Classification

#### Healthy Leaf

A healthy corn leaf has a normal green color and shows no signs of disease or damage.

#### Common Rust

Common rust is a fungal disease that causes small reddish-brown spots on corn leaves.

#### Gray leaf spot

Gray leaf spot is a disease that creates long gray or brown spots on corn leaves and can damage the plant.
